

Python Interview Questions – Next 5

1. What is a module in Python?

Answer: A module is a Python file that contains code such as functions, variables, or classes.

2. What is the use of import in Python?

Answer: import is used to bring a module into our Python program.

Example: import math

3. What is exception handling in Python?

Answer: Exception handling is used to handle errors without stopping the program. It uses try and except.

4. What is the difference between append() and insert()?

Answer: append() adds an item at the end of a list, while insert() adds an item at a specific position.

5. What is a nested list?

Answer: A nested list is a list that contains another list.

```
numbers = [[1, 2], [3, 4]]
```
