

## Python Basic Interview Questions – 5

### ***1. What is a dictionary in Python?***

Answer: A dictionary stores data in key-value pairs. Example: student = {"name": "Ravi", "age": 20}

### ***2. What is a tuple in Python?***

Answer: A tuple is used to store multiple values that cannot be changed. Example: numbers = (10, 20, 30)

### ***3. What is the use of type() in Python?***

Answer: type() is used to find the data type of a value. Example: type(10) gives int.

### ***4. What is the use of int() in Python?***

Answer: int() converts a value into an integer. Example: int("25") gives 25.

### ***5. What is the use of str() in Python?***

Answer: str() converts a value into a string. Example: str(25) gives "25".
