

## Python Basic Interview Questions – 5

### **1. What is a float in Python?**

Answer: A float is a number that contains a decimal point. Example: price = 25.5

### **2. What is a Boolean in Python?**

Answer: A Boolean represents one of two values: True or False.

### **3. What is a list in Python?**

Answer: A list is used to store multiple values in one variable. Example: fruits = ["Apple", "Banana", "Mango"]

### **4. What is the use of len() in Python?**

Answer: The len() function is used to find the number of items in a string, list, or other collection. Example: len("Hello") gives 5.

### **5. What is indentation in Python?**

Answer: Indentation means adding spaces at the beginning of a line. It is used to define blocks of code in Python. Example: if 10 > 5: print("Ten is greater")
