

Python Interview Questions – Next Level (5)

1. What is the difference between a list and a tuple in Python?

Answer: A list can be changed after creation, but a tuple cannot be changed.

2. What is a set in Python?

Answer: A set is a collection of unique values. It does not allow duplicate values.

Example: numbers = {1, 2, 3}

3. What is a conditional statement?

Answer: A conditional statement is used to execute code based on a condition. Examples are if, elif, and else.

4. What is the difference between for and while loops?

Answer: A for loop is generally used when we know the sequence or number of iterations. A while loop runs as long as a condition is true.

5. What is a function parameter?

Answer: A parameter is a value given to a function so that the function can use it.

```
def greet(name):  
    print("Hello", name)
```
